

Fukushima Radiation, What Prospects for Humanity

A Conversation with Helen Caldicott. Global Research News Hour Episode 173

By [Helen Caldicott](#) and [Michael Welch](#)

"Do not go to Japan. Do not under any circumstances take your children to Japan, because you don't know what you're eating and where the food is sourced..."

And the Japanese are trying now to export their radioactive food to London and elsewhere. Taiwan has refused to receive it. But, it's dangerous and it's going to continue to be dangerous for the rest of time. It's sad." **Dr. Helen Caldicott** (from this week's interview.)

Arnie Gundersen, a nuclear educator and former nuclear industry senior vice president, has referred to it as "the biggest industrial catastrophe in the history of mankind." [1]

Six years ago this week, a tsunami, triggered by a category 9.0 earthquake, slammed into the site of the Fukushima Daiichi nuclear facility on the north east coast of the Japanese island of Honshu. The natural disaster resulted in the failure of systems keeping the reactor cores and spent fuel rods cool, leading to core meltdowns in three of the plant's reactors, as well as damage from consequent hydrogen explosions. [2]

Enormous quantities of radioactive particles were released into the atmosphere and the water table leading to the Pacific Ocean. Approximately [170,000 people in the vicinity of the plant were immediately evacuated](#).

The World Health Organization downplayed the health risks from the catastrophe, concluding in their 2013 Health Risk Assessment from the nuclear accident that the risks of contracting certain cancers in certain sex and age groups were only "somewhat elevated." The report also concluded "no discernable increase in health risks from the Fukushima event is expected outside Japan." [3]

Nevertheless, a health management survey examining 38,000 children in Fukushima found three children diagnosed with thyroid cancer. The natural incidence is one in one million. [4]

Further, a December 2011 peer-reviewed report in the International Journal of Health Sciences found that in the 14 weeks immediately following the event, there were 14,000 excess deaths in the United States connected with radio-active fall-out from the Fukushima meltdowns. [5]

The Japanese government has been so successful in its efforts to assuage the concerns of the wider public that Prime Minister Abe was able to secure Tokyo as the site for the 2020 Olympic Summer Games! As of this month, the Abe government ends its housing subsidies to people evacuated from the area proximate to the nuclear facility, forcing those fearful of the lingering radiation to fend for themselves abroad. [6][7]

The nuclear accident may have profound consequences for all humanity, and possibly all life on Earth, yet the severity of the situation doesn't seem to merit major headlines.

On this, the sixth anniversary of the start of the Fukushima crisis, we spend the hour with world renowned nuclear watchdog, Dr. Helen Caldicott.

In this interview, conducted and recorded on International Women's Day, Dr. Caldicott talks about the high radiation reading recently recorded at Unit 2, efforts to contain the radioactive water spilling out of the facility, projected health risks from the cesium, tritium, strontium and other isotopes spewing from the site and much, much more. Caldicott also extends the discussion to talk about Canada's role in nuclear proliferation and the threats posed by the new Trump Administration and Cold War atmosphere in which it is situated.

Dr. Helen Caldicott is a physician and co-founder of [Physicians for Social Responsibility](#). She is a nominee for the Nobel Peace Prize, the recipient of the 2003 Lannan Prize for Cultural Freedom, and author or editor of several books including [Nuclear Madness: What You Can Do \(1979\)](#), [If You Love This Planet: A Plan to Heal The Earth \(1992\)](#), [The New Nuclear Danger: George W. Bush's Military-Industrial Complex\(2001\)](#), and [Crisis Without End -The Medical and Ecological Consequences of the Fukushima Nuclear Catastrophe \(2014\)](#). She is currently the president of the Helen Caldicott Foundation ([NuclearFreePlanet.org](#)). Her latest book, [Sleepwalking to Armageddon: The Threat of Nuclear Annihilation](#) will be available in bookstores in July, 2017.

The [Global Research News Hour](#) airs every Friday at 1pm CT on [CKUW 95.9FM](#) in Winnipeg. The programme is also podcast at [globalresearch.ca](#) . The show can be heard on the Progressive Radio Network at [prn.fm](#). Listen in every Thursday at 6pm ET.

Community Radio Stations carrying the Global Research News Hour:

CHLY 101.7fm in Nanaimo, B.C – Thursdays at 1pm PT

Boston College Radio [WZBC 90.3FM NEWTONS](#) during the Truth and Justice Radio Programming slot -Sundays at 7am ET.

[Port Perry Radio](#) in Port Perry, Ontario –1 Thursdays at 1pm ET

[Burnaby Radio Station CJSF out of Simon Fraser University](#). 90.1FM to most of Greater Vancouver, from Langley to Point Grey and from the North Shore to the US Border.

It is also available on 93.9 FM cable in the communities of SFU, Burnaby, New Westminister, Coquitlam, Port Coquitlam, Port Moody, Surrey and Delta, in British Columbia, Canada. – Tune in at its new time – Wednesdays at 4pm PT.

Radio station [CFUV 101.9FM](#) based at the University of Victoria airs the Global Research News Hour every Sunday from 7 to 8am PT.

[CORTES COMMUNITY RADIO CKTZ 89.5](#) out of Manson's Landing, B.C airs the show Tuesday mornings at 10am Pacific time.

[Cowichan Valley Community Radio CICV 98.7 FM](#) serving the Cowichan Lake area of Vancouver Island, BC airs the program Thursdays at 6am pacific time.

Campus and community radio [CFMH 107.3fm](#) in Saint John, N.B. airs the Global Research News Hour Fridays at 10am.

Caper Radio CJBW 107.3FM in Sydney, Cape Breton, Nova Scotia airs the Global Research News Hour starting Wednesday Morning from 8:00 to 9:00am. Find more details at www.caperradio.ca
